## 1 XOR

Note 2

The truth table of XOR (denoted by  $\oplus$ ) is as follows.

A	В	$A \oplus B$
F	F	F
F	Т	Т
Т	F	Т
Т	Т	F

- (a) Express XOR using only  $(\wedge,\vee,\neg)$  and parentheses.
- (b) Does  $(A \oplus B)$  imply  $(A \lor B)$ ? Explain briefly.
- (c) Does  $(A \lor B)$  imply  $(A \oplus B)$ ? Explain briefly.

## 2 Proof Practice

(a) Prove that  $\forall n \in \mathbb{N}$ , if *n* is odd, then  $n^2 + 1$  is even. (Recall that *n* is odd if n = 2k + 1 for some natural number *k*.)

(b) Prove that  $\forall x, y \in \mathbb{R}$ ,  $\min(x, y) = (x + y - |x - y|)/2$ . (Recall, that the definition of absolute value for a real number *z*, is

$$|z| = \begin{cases} z, & z \ge 0\\ -z, & z < 0 \end{cases}$$

(c) Suppose  $A \subseteq B$ . Prove  $\mathscr{P}(A) \subseteq \mathscr{P}(B)$ . (Recall that  $A' \in \mathscr{P}(A)$  if and only if  $A' \subseteq A$ .)

#### 3 Numbers of Friends

Note 2

Prove that if there are  $n \ge 2$  people at a party, then at least 2 of them have the same number of friends at the party. Assume that friendships are always reciprocated: that is, if Alice is friends with Bob, then Bob is also friends with Alice.

(Hint: The Pigeonhole Principle states that if *n* items are placed in *m* containers, where n > m, at least one container must contain more than one item. You may use this without proof.)

### 4 Preserving Set Operations

Note 0 Note 2

For a function *f*, define the image of a set *X* to be the set  $f(X) = \{y \mid y = f(x) \text{ for some } x \in X\}$ . Define the inverse image or preimage of a set *Y* to be the set  $f^{-1}(Y) = \{x \mid f(x) \in Y\}$ . Prove the following statements, in which *A* and *B* are sets.

*Recall:* For sets X and Y, X = Y if and only if  $X \subseteq Y$  and  $Y \subseteq X$ . To prove that  $X \subseteq Y$ , it is sufficient to show that  $(\forall x) \ ((x \in X) \implies (x \in Y))$ .

(a)  $f^{-1}(A \cup B) = f^{-1}(A) \cup f^{-1}(B)$ .

(b)  $f(A \cup B) = f(A) \cup f(B)$ .
