## 1 Probabilistic Bounds

A random variable $X$ has variance $\operatorname{Var}(X)=9$ and expectation $\mathbb{E}[X]=2$. Furthermore, the value of $X$ is never greater than 10 . Given this information, provide either a proof or a counterexample for the following statements.
(a) $\mathbb{E}\left[X^{2}\right]=13$.
(b) $\mathbb{P}[X=2]>0$.
(c) $\mathbb{P}[X \geq 2]=\mathbb{P}[X \leq 2]$.
(d) $\mathbb{P}[X \leq 1] \leq 8 / 9$.
(e) $\mathbb{P}[X \geq 6] \leq 9 / 16$.

## 2 Vegas

On the planet Vegas, everyone carries a coin. Many people are honest and carry a fair coin (heads on one side and tails on the other), but a fraction $p$ of them cheat and carry a trick coin with heads on both sides. You want to estimate $p$ with the following experiment: you pick a random sample of $n$ people and ask each one to flip their coin. Assume that each person is independently likely to carry a fair or a trick coin.
(a) Let $X$ be the proportion of coin flips which are heads. Find $\mathbb{E}[X]$.
(b) Given the results of your experiment, how should you estimate $p$ ? (Hint: Construct an unbiased estimator for $p$ using part (a). Recall that $\hat{p}$ is an unbiased estimator if $\mathbb{E}[\hat{p}]=p$.)
(c) How many people do you need to ask to be $95 \%$ sure that your answer is off by at most 0.05 ?

## 3 Working with the Law of Large Numbers

(a) A fair coin is tossed multiple times and you win a prize if there are more than $60 \%$ heads. Which number of tosses would you prefer: 10 tosses or 100 tosses? Explain.
(b) A fair coin is tossed multiple times and you win a prize if there are more than $40 \%$ heads. Which number of tosses would you prefer: 10 tosses or 100 tosses? Explain.
(c) A fair coin is tossed multiple times and you win a prize if there are between $40 \%$ and $60 \%$ heads. Which number of tosses would you prefer: 10 tosses or 100 tosses? Explain.
(d) A fair coin is tossed multiple times and you win a prize if there are exactly $50 \%$ heads. Which number of tosses would you prefer: 10 tosses or 100 tosses? Explain.
